**Lands Energy Consulting**

Seattle, WA

2001-Present Principal

Co-own and manage a consulting firm providing energy trading, supply acquisition, and energy supply risk management advisory services to large energy users such as utilities, independent power producers, and large industrials. Consulting services include asset portfolio valuation, resource acquisition process management (including structured RFPs), strategic planning, training, and risk policy development. Key projects have included facilitating scheduling efforts for the purchasers of the BPA Slice contract, advisory services to northwest public utilities on energy risk management and trading, the facilitation of multiple long-term resource acquisition processes, including work for both public and investor-owned utilities, and expert witness service involving both energy supply contract disputes and regulatory approval processes required of utilities.

**Seattle City Light**

Seattle, WA

1999-2001 Power Marketer

Coordinated within-month marketing with the overall utility resource hedging strategy. Ensured a short-term operation of Seattle's assets that optimized their economic value within operating and regulatory constraints. Included in Seattle's portfolio is over 2,000 mw of hydro-electric generating assets, multiple long-term contracts for power purchases/sales, 1,312 mw of long term firm transmission rights on the BPA main grid, and 160 mw of capacity ownership on the NW/SW AC Intertie. Advised senior management, including City Councilmembers, on the implementation of long term risk mitigation hedging strategies consistent with Seattle's dynamically changing load and resource balance.

Lead the negotiation for purchase of a 10-year power purchase contract from the Klamath Falls cogeneration project, including the execution of the first gas derivative hedge by Seattle City Light in order to mitigate the gas price exposure contained in the electricity purchase contract.

**Puget Sound Energy**

Bellevue, WA

1990-1999 Senior Electricity Trader (Title upon departure)

Puget's designated operations liaison with Duke Energy during the Puget/Duke operating and trading alliance. Coordinated trading and marketing activity between Duke's trading floor in Salt Lake City and Puget's trading floor in Bellevue. Worked with Duke's origination staff in the marketing of non-standard product offerings within the Northwest. Reviewed the modeling of Puget's resource assets within trading books at Duke, and evaluated the performance of the hedging activities within those books.

Prior to the alliance with Duke, developed Puget's forward electricity trading operation. Initiated Puget's trading through the brokered over-the-counter electricity markets for western points of receipt. Helped establish and develop fundamental analysis techniques to support trading efforts. Trading goals for Puget included both hedge trading around their existing asset base and speculative trading within a well defined value-at-risk mechanism.

Provided analytical support for Puget's lawsuit against the Bonneville Power Administration for alleged breach of their regional preference obligations. Also, testified as the internal operational expert during Puget's lawsuit with the March Point Cogeneration Company.

**Bonneville Power Administration**

Portland, OR

Summer, 1988 Engineering Intern - West Coast Market Modeling

Designed and programmed various aspects of the Accelerated California Market Estimator ("ACME") computer model, which simulates an economic dispatch of the Southwest electric generating resources in order to forecast the Southwest electric market through identification of the marginal resources.

**Gonzaga University**

Spokane, WA

1986-1989 Bachelor of Sciences degree – May, 1989. Major in physics with a minor in mathematics.
